Profile

Senior Software Engineer and Technical Lead with 6+ years in the UK energy sector, currently leading engineering delivery on complex, regulation-driven projects at Kaluza. Represents Industry UK engineering within the cross-functional leadership group for Kaluza's largest client — driving cross-team planning, platform health reviews, and risk management — while running technical interviews and leading discovery for regulatory and change requests.

Work Experience

Kaluza — Edinburgh, United Kingdom

Feb 2020 – Present

Industry UK — Industry & DCC (Smart Metering) Integrations

Senior Software Engineer

March 2025 – Present

- **Technical Leadership:** Acting technical lead for a team of 5 engineers on Industry UK, covering both industry and DCC (smart metering) integrations.
- **Client Leadership:** Represent Industry UK engineering within the cross-functional leadership group (tech leads, product, ops, and client delivery) for OVO, Kaluza's largest client, covering high-level planning across cross-team dependencies, platform health reviews, and risk management.
- **Stakeholder Engagement:** Work cross-team, internally and with clients, engaging both technical and non-technical stakeholders; conduct technical and system design interviews and lead discovery for change requests and upcoming regulatory changes.
- **Infrastructure Migration:** Led the migration of 24 services from a self-hosted Kubernetes cluster onto Kaluza's managed infrastructure platform, reducing time spent on cluster maintenance, delivering cost savings, and strengthening security through centrally managed secrets and shared monitoring and patching.
- **Client Integration:** Delivered an API enabling Kaluza's largest client to bring smart pay-as-you-go top-up functionality directly into their own app, replacing a costly third-party integration.
- **Regulatory Compliance:** Delivered client readiness for Market-wide Half-Hourly Settlement (MHHS), ensuring compliance two months ahead of the industry's revised go-live date.
- **Technical Communication:** Presented the smart top-up API to company leadership, the C-suite, and senior client stakeholders, and gave internal talks on the GitHub Actions migration and MHHS delivery challenges.

Software Engineer II

Jan 2023 – March 2025

- Acted as technical lead for the 6-engineer Industry UK team from August 2024, mentoring junior engineers and new starts.
- Designed technical solutions to replace legacy meters in 200,000+ customer homes ahead of regulatory deadlines, and to enable smart meter installation, mode changes, and prepayment configuration.
- Built core platform services to configure, control, and fetch data from smart meters, including CI/CD pipelines and testing with QA teams and physical meters.
- Migrated 50+ CI/CD pipelines from CircleCI to GitHub Actions.
- Designed and led a real-time migration of smart meters from a major client's legacy CRM to the Kaluza platform, engineered to run without disruption or negative impact to customers.
- Implemented serverless cloud infrastructure enabling communication with the wider UK energy industry.

Software Engineer

Feb 2020 – Jan 2023

- Built user journeys using Kotlin and Kafka Streams to support smart meter operations.
- Built the front-end tooling used by call centre and back-office agents to control smart meters.

Spark Energy — Selkirk, United Kingdom

Jan 2018 – Feb 2020

QA Engineer

May 2019 – Feb 2020

QA Team

- Designed and implemented automated testing, and supported the move from an on-prem monolith to cloud-based microservices, working with stakeholders on user acceptance testing.

MI Analyst and Resource Planner

Jan 2018 – May 2019

- Overhauled customer service MI reporting and automated daily reporting, cutting it from 6 person-hours to 30 minutes, and led resource planning for 200+ agents through the company's acquisition by OVO.

Education and Certifications

- **B.Sc (Hons), Computer Games Technology (2:1)**, Abertay University, Dundee — 2014–2017
- **ISTQB Certified Tester Foundation Level (CTFL)** — 2018

Technologies and Languages

- **Languages:** Scala, Kotlin, TypeScript, JavaScript, Python, C++
- **Technologies:** AWS (Lambda, DynamoDB, S3, SQS, Transfer Family), Cats Effect, Kubernetes, Kafka, Terraform, Docker, Git, React, SQL
- **Other:** Data structures & algorithms, Data analysis, Systems design, Test automation, Agile/Scrum
